**DETAILED ACTION**

1. Claims 1-30 are presented for examination.

***Election/Restrictions***

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-20 and 28-30, drawn to a method of correcting a logic failure in an IC by using an FPGA, classified in class 714, subclass 3.
  - II. Claim 21, drawn to a method of evaluating simulated errors by injection, classified in class 716, subclass 4.
  - III. Claims 22-27, drawn to an IC and method with the IC including an ICE, and using an FPGA to correct logic errors, classified in class 703, subclass 28.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)).

- a. In the instant case, the combination (I) as claimed does not require the particulars of the subcombination (II) as claimed because it does not require the particulars of evaluation of error recovery to be patentable, and evaluation of error recovery (II) need not require invention I. The subcombination II has

separate utility such as an evaluation of how well a circuit with injected errors can recover from the errors.

b. In the instant case, the combination (I) as claimed does not require the particulars of the subcombination (III) as claimed because it does not require the particulars of an ICE to be patentable, and ICE breakpoint analysis (III) need not require invention I. The subcombination III has separate utility such as a breakpoint analysis of logic states in an IC.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Mr. Steven Fishman on 6/28/2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
